**Re: Lead and Copper in Drinking Water Sampling
200 RT 35, Neptune City, NJ 07753**

Dear Ms. Ubanski:

Environmental Testing Services, LLC. provided water testing for lead on November 10th, 2016.

The purpose of this project was to sample the school's drinking water for the presence of lead. Only First draw samples were collected during this inspection. Second draw water testing will be done if the First draw test shows lead amounts exceeding the EPA limit. The locations of each testing location were given to the inspector earlier as to where the use of each water source frequently used.

Samples were collected in 250 ml bottles. Samples were immediately transported to EMSL Analytical, Inc., a New Jersey Department of Environmental Protection (NJ DEP) certified laboratory for the analysis of the drinking water.

Results of the sampling found all locations tested were below the 15 ppb threshold for acceptable drinking water with regard to lead.

Sample analysis results and the chain of custody are attached to this report.

If you should have any questions, please feel free to contact us at (856) 432-4468

Sincerely,

A handwritten signature in black ink, appearing to read 'Michael Stefkovic', written over a horizontal line.

Michael Stefkovic,
President
